LUIGI

Linking Urban and Inner-Alpine Green Infrastructure – Multifunctional Ecosystem Services for more liveable territories

Orchards, forests, rivers, green paths, … There is a great variety of spaces connecting mountain ecosystems and urban centres. Each of these natural or semi-natural spaces, also referred to as green infrastructure, brings environmental, economical and societal benefits: supply of food, water, materials, recreation areas, tourism, pollination, climate regulation… It is precisely this wide range of benefits, called ecosystem services, that LUIGI explores and promotes, strengthening rural and urban areas rapport for a better quality of life.
